

Bond Update

Volume 11

Greetings Fitzgerald Community!

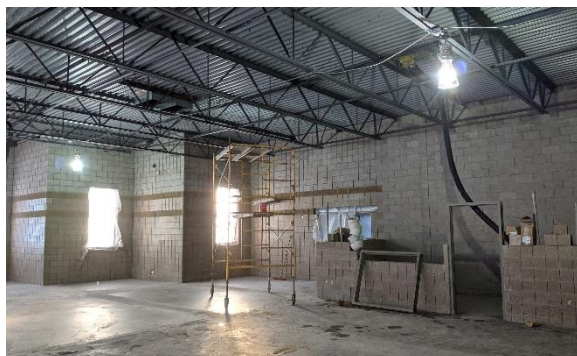

Thank you, as always, for your continual support. With the new year underway, we are excited to both continue progress on the High School Weight Room Addition and renovations to the Neigebaur Administration Building as well as embark on a variety of new projects within the District that will improve the learning experience for our students. Bids have been accepted for Bond Series 2 work and construction is anticipated to start this spring.

Work on the Fitzgerald High School Weight Room Addition is continuing at a steady pace. The exterior brickwork is nearing completion and will help visually unite the new addition with the existing High School. The interior floor slab has also been placed and work on interior walls and rough mechanical & electrical is scheduled to begin this month. Finally, modifications to the existing entry vestibule are well underway and will provide additional space for students and visitors to gather before events.

Improvements at the Neigebaur Administration Building include a new Board Room and exterior restorations.

At the Neigebaur Administration Building, exterior façade restorations are complete, including masonry work and new metal wall panels. Inside the building, progress continues on interior renovations including the framing of the walls and soffits in the new District Board Room. The installation of millwork and new finishes throughout the office suites is also underway. We look forward to the completion of these projects in the coming months and the opportunities they will provide to our students and community!

Recently completed work at the Weight Room Addition includes exterior brick installation and placing of interior slabs.
